Election/Restrictions

1. A telephone call was made to Joseph Scafetta, Jr. on 2/24/04 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

2. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

3. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8 and 12, drawn to a decoding unit for decoding a turbo code sequence, the decoding unit comprising a plurality of decoders for decoding at least two data blocks in parallel, classified in class 714, subclass 786.
- II. Claims 9-11, drawn to a decoding unit for decoding a turbo code sequence, the decoding unit comprising a decoder for decoding data blocks in sequence, classified in class 375, subclass 341.

The inventions are distinct, each from the other because of the following reasons:

Inventions "a decoding unit for decoding a turbo code sequence, the decoding unit comprising a plurality of decoders for decoding at least two data blocks in parallel" and "a decoding unit for decoding a turbo code sequence, the decoding unit comprising a decoder for decoding data blocks in sequence" are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions "decoding data blocks in parallel using a plurality of decoders" require multiple decoders, it is a parallel operation and "the decoding data blocks in sequence using a decoder" need a single decoder and it is a sequential operation.
